4. The application has been amended as follows:

Please amended claims 74 and 86 as follows:

74. (currently amended) a method for determining filtering combinations of a spatial processing operation, the filtering combinations $\{ \mathbf{F}_{lm}^{(t)} \}$ being intended to be applied to an initial sound field representation $\{ \mathbf{P}_{lm}^{(t)} \}$ formed by coefficients representative of the initial sound field in time and in the three spatial dimensions, in order to provide a modified sound field representation $\{ \mathbf{P}_{la}^{(t)} \}$ formed by coefficients representative field

Art Unit: 2614

representative of that field in time and in the three spatial dimensions, the method comprising:

- defining (2) via a programmed computer processor the processing operation by a set of at least one directivity function,
- defining via a programmed processor a predetermined operation applied on the initial sound field representation and the set of at least one directivity function,
- establishing (4) via a programmed computer processor spherical harmonic coefficients of each directivity function;
- determining via a programmed processor weighting coefficients (c) associated with the predetermined operation, wherein determining (6) filtering combinations comprises determining (30) each filtering combination from a linear combination of the spherical harmonic coefficients (G) with the weighting coefficients (c), and
- determining (6) via a programmed computer processor the filtering combinations from the spherical harmonic coefficients.

86. (currently amended) A device for determining filtering combinations of a spatial processing operation, the filtering combinations $\{C_{lm}^{(k,m)}\}$ being intended to be applied to an initial sound field representation $\{P_{lm}^{(i)}\}$ formed by coefficients representative of the initial sound field in time and in the three spatial dimensions, in order to provide a modified sound field representation $\{P_{lm}^{(m)}\}$ formed by coefficients representative field representative of that field in time and in the three spatial dimensions, the device comprising:

a processor programmed to include:

Art Unit: 2614

- means for defining the processing operation by a set of at least one directivity function,
- means for defining a predetermined operation applied on the initial sound field representation and the set of at least one directivity function,
- means for establishing spherical harmonic coefficients of each directivity function;
- means for determining weighting coefficients (c) associated with the predetermined operation, wherein determining (6) filtering combinations comprises determining (30) each filtering combination from a linear combination of the spherical harmonic coefficients (G) with the weighting coefficients (c), and
means for determining the filtering combinations from the spherical harmonic coefficients.
